

The Modified “Brazilian” Abdominoplasty (“Tummy-Tuck”)

The Modified “Brazilian” Abdominoplasty was introduced into the UK in 2008 and has dramatically decreased the rate of morbidity for the procedure. The technique and evidence base behind the procedure is discussed in our Member’s Section. Prospective abdominoplasty patients should, at least, be informed of the benefits and risks associated with abdominoplasty. There is some information in our advice sheet under Abdominoplasty but for further detailed information on this novel technique email UKAAPS at info@ukaaps.org and/or contact one of our Member Surgeons.
